Performance analysis

16/10/2026 **16–22 Oct 2026** LIVE 22/10/2026

dashed line: the comparison period

SOURCES

- Meta Ads
- Instagram Business
- TikTok
- Shopify
- Klaviyo
- Google Analytics 4

[1] **Meta Ads**: Conversions use the ad account's attribution window (7-day click, 1-day view by default); Ads Manager may show another window. Dates follow the ad account's time zone. Figures for the last 72 hours are still being updated by Meta. Reach is fetched as a true period total, so it is not the sum of the daily values.

[2] **Instagram Business**: Dates follow UTC as the Instagram API reports them. Insights for the last 48 hours can still change. Reach and profile views are period totals, not sums of daily values.

[3] **TikTok**: Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions.

[4] **Shopify**: Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions.

[5] **Klaviyo**: Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions.

[6] **Google Analytics 4**: Conversions and channels follow the property's attribution model (data-driven by default). Dates follow the GA4 property's time zone. Data for the last 24 to 48 hours is still being processed. Google may apply sampling or thresholding to small segments, so detailed breakdowns can differ from the totals.

Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions. Data fetched 23/10/2026.
