TIMELINE

> 28/09/2026
>
> **Spring collection launch**
>
> New range live on the site; Meta catalog campaign switched on.

[1] **Meta Ads**: Conversions use the ad account's attribution window (7-day click, 1-day view by default); Ads Manager may show another window. Dates follow the ad account's time zone. Figures for the last 72 hours are still being updated by Meta. Reach is fetched as a true period total, so it is not the sum of the daily values.

[2] **Google Ads**: Conversions use the conversion actions' own attribution models and windows, so they can keep rising for up to 30 days. Dates follow the ad account's time zone. Figures for the last 3 days are still being finalised by Google.

[3] **Instagram Business**: Dates follow UTC as the Instagram API reports them. Insights for the last 48 hours can still change. Reach and profile views are period totals, not sums of daily values.

[4] **Facebook Page**: Dates follow the Page's time zone. Insights for the last 48 hours can still change. Reach is a period total, not a sum of daily values.

[5] **Google Analytics 4**: Conversions and channels follow the property's attribution model (data-driven by default). Dates follow the GA4 property's time zone. Data for the last 24 to 48 hours is still being processed. Google may apply sampling or thresholding to small segments, so detailed breakdowns can differ from the totals.

[6] **Google Search Console**: Dates follow Pacific time as Search Console reports them. Search Console data arrives 2 to 3 days late, so the last days of a period are usually incomplete. Rare queries are anonymised by Google and left out of the query table.

[7] **WooCommerce**: Dates follow the store's time zone. Orders are counted by their creation date and include every status except cancelled, failed and refunded.

[8] **Mailchimp**: Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions.

[9] **Google Business Profile**: Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions.

Numbers come from each platform's API at generation time and can differ from its interface because of attribution windows, time zones and late conversions. Data fetched 19/10/2026.

Summary for Acme Running Co

2026-09-01 → 2026-09-30, compared with 2026-08-01 → 2026-08-31. 34 of 53 tracked metrics moved by 5% or more.

What improved

- **Meta Ads – Conversions:** 544 (+28.3% vs 424)
- **Meta Ads – Amount spent:** €6,908 (+24.8% vs €5,535)
- **Meta Ads – Clicks on the link:** 11,640 (+24.1% vs 9,381)
- **Meta Ads – Total reach:** 293,952 (+22.6% vs 239,667)

Needs attention

- **Google Ads – Conversions:** 534 (-15.0% vs 628)
- **Google Ads – Amount spent:** €7,102 (-12.7% vs €8,133)
- **Google Ads – Clicks on the link:** 12,107 (-11.9% vs 13,738)
- **Google Ads – Total reach:** 324,541 (-9.7% vs 359,401)

Efficiency: spend moved +24.8% while conversions moved +28.3%. Results are growing faster than investment — there is room to scale.

Suggested next steps

- Investigate the drop in *Google Ads – Conversions* (-15.0%).
- Double down on what worked: *Meta Ads – Conversions* (+28.3%).
- Set goals for the headline metrics so deviations trigger alerts mid-month.
